SECTION 01

01 About this report

Voluntary reporting by a young company

This is the first full sustainability report of Aurelia Renewables Pvt Ltd, an Ahmedabad-based developer and operator of utility-scale solar power. It covers the financial year from 1 April 2024 to 31 March 2025 and describes our one operating asset, the Kutch Solar Park, together with our corporate and project development offices.

Boundary and approach

We are an unlisted company and are not required to file a BRSR, but we have chosen to report voluntarily using the BRSR Core structure, GRI Standards 2021 and the TCFD recommendations, because our lenders and offtakers increasingly expect it. All data is self-reported and has been compiled by our own teams. We have not obtained external assurance for this report, and the assurance section explains how we have reviewed the data internally.

FRAMEWORKS AND STANDARDS APPLIED

- **SEBI BRSR and BRSR Core**, as per the circulars applicable to the top 1,000 listed entities by market capitalisation.
- **GRI Standards 2021**, in reference to GRI 1, GRI 2 and GRI 3 and the topic standards listed in the content index.
- **TCFD** recommendations on governance, strategy, risk management, and metrics and targets.
- National Guidelines on Responsible Business Conduct (NGRBC) and the nine principles they set out.
- Greenhouse Gas Protocol Corporate Standard and Scope 2 Guidance.

Information on the project covers the construction and operation of solar generation, the substation and the transmission line to the grid interconnection point. Land lease arrangements, panel manufacturers and transport providers are outside the boundary, though we describe how we manage them.

A young company can still hold itself to an old-fashioned standard of clear accounts.

Chief Financial Officer

The Board approved this report on 12 June 2025. We welcome feedback to the address on the back cover.

NOTES

1. MWp denotes megawatt peak, the DC nameplate capacity of the solar modules.

2. Figures are rounded and may not sum exactly.

SECTION 02

02 Message from the Founder and CEO

Powering tomorrow, responsibly

Dear partners,

Eight years ago, a handful of engineers and I stood on a salt-white plain in Kutch with a survey map and a shared conviction that the desert's most abundant resource could power the cities in the east. Today, the plain carries three quarters of a gigawatt of solar modules, and the grid in Gujarat is a little cleaner for it.

The year to March 2025 was one of consolidation. We completed the last phase of the Kutch Solar Park, stabilised operations and improved availability. We also began to think harder about how a solar developer should measure itself, because clean electricity is only the beginning of a responsible project.

Land, water, workers and waste matter as much as megawatts. A desert is not empty, and our neighbours there include pastoralists, salt workers, birds and a fragile ecology. We have tried to design, build and operate with that in mind.

Clean power should come from clean practice.

Founder and Chief Executive Officer

In this report we describe our approach to emissions, water, nature and people, and provide the data we have. We are a young company with young systems, and we say plainly where data is self-reported and not yet independently verified.

As we grow, our motivation stays simple. We are passionate about building a cleaner world for future generations. We hope this report helps you hold us to it.

I would like to thank our lenders, our offtakers, the Gujarat state authorities and, above all, the hundreds of people who built and operate the park.

Sincerely,
Kiran Desai

Founder and Chief Executive Officer
Ahmedabad, 12 June 2025

YEAR IN BRIEF

- Final phase of Kutch Solar Park commissioned
- Robotic dry cleaning fleet deployed across the park
- Community water access programme extended
- First voluntary sustainability report published

SECTION 03

03

Company at a glance

A single large solar park in Kutch

750 MWp

Installed capacity

Rs 1,180 crore

Revenue, FY2025

1

Operating solar park

About 640

Employees and long-term contractors

Aurelia Renewables Pvt Ltd was incorporated in 2016 in Ahmedabad. We develop, build, own and operate solar power plants and sell electricity to state distribution companies and corporate buyers under long-term power purchase agreements.

Our operating asset is the Kutch Solar Park in Gujarat, built in phases between 2019 and 2025 on leased land in a region of high solar irradiance and low population density. The park uses bifacial modules on single-axis trackers, feeds a dedicated pooling substation and evacuates power over a transmission line to the state grid.

Operating facilities

#	Facility	Type	Location	Coordinates	Rated capacity
1	Kutch Solar Park	Solar park	Kutch, Gujarat	23.73 N, 69.86 E	750 MWp

Coordinates are approximate and rounded to two decimals. Capacities are nameplate figures as at 31 March 2025.

Figure 3.1 Location of the Kutch Solar Park in Gujarat.

Figure 3.2 Installed capacity at year end, FY2021 to FY2025 (MWp).

Business profile

Indicator	Unit	FY21	FY22	FY23	FY24	FY25
Installed capacity	MWp	150	300	450	600	750
Electricity generated	GWh	190	420	690	960	1,320
Revenue	Rs crore	160	330	560	840	1,180

Self-reported, unaudited management information for generation. Revenue is from management accounts.

Figure 3.3 Electricity generated, FY2021 to FY2025 (GWh).

Our offtake portfolio is a mix of state utilities and commercial and industrial customers. We employ people directly in operations, maintenance and

corporate roles, and engage contractors for security, module cleaning and civil work.

SECTION 04

04 Materiality and stakeholders

Choosing what to report on

For this first report we carried out a streamlined materiality assessment. Management and Board members listed topics relevant to utility-scale solar based on sector standards, lender questionnaires and

peer reports. We then consulted lenders, offtakers, panel suppliers, employee representatives and village leaders near the park, and asked them to rank the topics.

Figure 4.1 Materiality matrix. Highlighted bubbles are priority topics.

Reading the results

Lenders and offtakers rated grid reliability and climate impact highest. Village leaders emphasised land access, water and local employment. Employees spoke about safety in extreme heat. Together, they pointed to a set of priority topics that shape the structure of this report.

WHO WE ENGAGED

- Project lenders and development finance institutions
- Offtakers and grid operators
- Panchayats and pastoral community groups
- Employees and contractors on site

We will broaden the process in future years and add structured engagement with non-governmental organisations and academic institutions working on arid-zone ecology.

SECTION 05

05

Strategy and roadmap

Building, operating and preparing for the next phase

Our strategy has three parts. First, to build and operate solar capacity that delivers reliable power at competitive cost. Second, to do this with low impact on land, water and communities. Third, to prepare for the next stage of the energy transition, in which solar will be paired with storage and, eventually, with new demand such as green hydrogen.

Operate well

Availability, performance ratio and safe operations are the foundation. We invest in monitoring, predictive maintenance and workforce training to keep plant performance high.

Figure 5.1 Roadmap by phase. Phases indicate themes of work.

Minimise impact

We avoid sensitive habitats in site selection, use waterless cleaning, and recycle materials where possible. Impact assessments precede each phase of construction.

Prepare for what comes next

Battery storage pilots, hybrid designs and potential new sites in Rajasthan are being evaluated, subject to regulatory approvals and financing.

INVESTMENT DISCIPLINE

Every project is assessed for environmental and social risk before financial close, and lenders' standards, including the IFC Performance Standards, guide our design.

SECTION 06

06

Climate and energy

Low-carbon power, honestly accounted

Solar plants avoid the combustion emissions of fossil-fuel generation, but they are not free of a carbon footprint. Our direct emissions arise mainly from diesel used in generator sets and vehicles at the park, and

from small amounts of refrigerants and sulphur hexafluoride in switchgear. Embedded emissions in modules and steel sit in our Scope 3.

Emissions

We have worked to reduce our fuel use by electrifying site vehicles and improving grid reliability for auxiliary loads. Our Scope 1 emissions fell by 30% in FY2025 compared with FY2023.

Electricity use

Our own consumption is a small fraction of what we generate, and we ensure that it comes from clean sources. 100% of the electricity used at our offices and plants in FY2025 was renewable.

CLIMATE GOVERNANCE

- Board reviews climate risk twice a year
- Physical risk screening of extreme heat, dust storms and flooding
- Transition risk focus on tariffs, curtailment and policy
- Scenario analysis planned for the next cycle

Climate risk is real for a solar park. Extreme heat reduces module efficiency and can stress equipment. Dust storms soil modules, and rare but intense rainfall can flood access roads. We have designed drainage and elevated critical equipment, and review insurance cover annually.

We have started building a Scope 3 inventory, starting with purchased goods, such as modules and steel, and transport. We will report on it once the data are robust.

NOTES

1. Scope 1 emissions comprise diesel combustion and fugitive gases.
2. Reported figures are self-reported by the company and have not been externally assured.

SECTION 07

07

Water

Dry cleaning in a dry land

Kutch is a semi-arid region where water is scarce and precious. Conventional solar plants rely on water washing to remove dust from modules, and a park of our size could use large volumes. We decided early to find an alternative.

We now use a fleet of battery-powered robots that brush the modules without water. Robotic dry cleaning of panels cut our water withdrawal by 85% versus FY2022. The robots work at night and in the early morning, when generation is low, so there is no loss of output.

WATER PRACTICES

- Waterless cleaning with brushing robots
- Drinking water for staff supplied by treated sources and packaged water
- Rainwater capture at the operations building
- No process discharge to land or water

Water for construction, dust suppression and the staff colony has been supplied under permits from state authorities. We monitor the quantities and keep records

for audit by lenders.

Sharing water with neighbours

In partnership with local panchayats we have built storage tanks and pipelines to improve drinking water access for several hamlets, and we help maintain traditional ponds that serve livestock.

Water risk is part of our enterprise risk process, and we will continue to report how we use and share this scarce resource.

SECTION 08

08 Biodiversity and land

A solar park on arid grassland

The Rann of Kutch and the grasslands around it support remarkable wildlife, from flamingos and houbara bustards to wild asses and desert foxes. The Kutch Solar Park is located on land classified as revenue wasteland, outside notified protected areas, and sited after an ecological screening.

Our land use has been planned to limit habitat disturbance. Our Kutch Solar Park caused zero forest loss during FY2025. We use satellite images and field surveys to keep track.

Design for wildlife

We left corridors between array blocks, raised the lower edge of fences to allow small animals to pass, and avoided lighting that attracts insects and birds. Vegetation under the panels is allowed to regrow with native grasses and is managed with grazing by local shepherds rather than herbicides.

BIODIVERSITY PROGRAMME

- Ecological baseline survey before each phase
- Avian monitoring during winter migration
- Native grass restoration under arrays
- Grazing arrangements with local pastoralists

Birds are sometimes confused by reflective surfaces. Our monitoring has not found evidence of significant collisions, and we continue to look for evidence and share results with experts from conservation institutes.

SECTION 09

09

People and safety

Working safely in the desert

Working outdoors in a desert brings risks: extreme heat, high voltage, vehicle movement and working at height. Our safety approach emphasises hazard identification, controls and a culture of speaking up.

We track incidents and report openly on them. Our LTIFR stood at 0.05 in FY2025. The figure is self-reported and calculated per million person-hours worked, including contractors.

SAFETY MEASURES

- Heat stress protocol with work-rest schedules, shaded rest areas and hydration points
- Electrical safety training and lock-out tag-out
- Permit to work for high-risk jobs
- Emergency response drills with the local fire service

Our people

We are a young team with an average age in the early thirties. Engineering, operations and project roles are filled through campus hiring, lateral recruitment and a

technician training programme developed with local industrial training institutes.

Inclusion

We aim to build a diverse team. Recruitment panels include women where possible, the on-site colony has family accommodation and a crèche, and an Internal Committee handles complaints of harassment. Local hiring is a priority for semi-skilled positions.

We offer health insurance, accident cover, and a provident fund to employees, and ensure that contractors comply with minimum wage and working hour laws.

SECTION 10

10

Community

Neighbours in a shared landscape

The villages near the Kutch Solar Park, home mostly to pastoral and salt-working families, have lived with this landscape for generations. We have tried to approach them as neighbours who deserve consultation, not merely as stakeholders.

Figure 10.1 Community investment by theme, FY2025 (Rs crore).

Water, education and livelihoods

Priorities were set through village meetings. Water access came first, followed by education and livelihoods. We supported school buildings and teachers, skills training for solar technicians, and market links for local crafts such as embroidery.

Land and grazing

Our lease agreements were negotiated with the revenue department and, where relevant, with village committees. Access paths for herders and their animals

have been maintained across the park, and we agreed seasonal grazing arrangements.

GRIEVANCE MECHANISM

Villagers can approach the community liaison office, call a toll-free number or leave a note at the park gate. Complaints are logged and answered within set timelines.

SECTION 11

11 Governance and ethics

Board, policies and risk

Aurelia is a private limited company, governed by a Board with seven directors, including representatives of our institutional investors and two independent directors. We have voluntarily set up Audit and Risk, and Nomination and Remuneration committees, even though the law does not require them for a company of our kind.

Policies

The Board has approved policies on code of conduct, anti-bribery, whistle-blowing, human rights, health and safety, environment and procurement. Employees and contractors receive training on these policies, and a hotline operated by an external provider allows anonymous reporting of concerns.

LENDER STANDARDS

Our debt facilities incorporate environmental and social covenants based on the IFC Performance Standards and Equator Principles, and we report to lenders twice a year.

Risk

Our risk register covers regulatory change, curtailment, counterparty risk, supply of modules, extreme weather, cyber security and safety. Owners review risks monthly, and the Audit and Risk Committee reviews the top risks each quarter.

We do not make political donations. We are members of industry associations for solar developers and participate in policy consultations with transparency.

SECTION 12

12

Supply chain and end of life

Responsible sourcing and recycling

Solar modules, trackers, inverters and steel make up most of the material footprint of our projects. These come from manufacturers in India, China and elsewhere, and we take care to understand who they are and how they operate.

Procurement standards

Our procurement policy requires suppliers to comply with labour, health and safety and environmental laws, and to confirm that they do not use forced labour. Module suppliers must provide traceability declarations for polysilicon and wafers, and we favour manufacturers that have undergone third-party social audits.

SUPPLIER DUE DILIGENCE

- Questionnaire and desktop screening
- Audit reports reviewed by our team
- Contractual right to inspect
- Escalation and exit processes for serious breaches

End of life

Solar modules last around thirty years, so the volume of end-of-life panels is still small. However, we are planning ahead. We have signed a memorandum with an authorised e-waste recycler to explore recovery of glass, aluminium, silicon and silver from modules, and we keep records of damaged panels removed during operations.

Packaging from deliveries, mostly wood and cardboard, is returned to suppliers or sent for recycling. Hazardous materials such as used oil and batteries are handled by authorised recyclers.

SECTION 13

13 Performance data

Self-reported indicators

The table below summarises the key sustainability indicators we report, in the same terms as the claims made elsewhere in this report. All values are self-

reported by Aurelia, and are not externally assured.

Self-reported sustainability indicators

Indicator	Unit	FY2023	FY2024	FY2025
Scope 1 emissions (index, FY2023 = 100)	Index	100	84	70
Renewable share of electricity used at offices and plants	%	n.r.	n.r.	100
Water withdrawal (index, FY2022 = 100)	Index	n.r.	n.r.	15
Lost Time Injury Frequency Rate (per million hours)	Rate	n.r.	n.r.	0.05
Forest loss attributable to park	ha	n.r.	n.r.	0

n.r. means not reported in this edition. Values are self-reported and unaudited.

Indices are used rather than absolute values for Scope 1 and water because the baseline years are before the park reached full capacity, and absolute comparison would not be meaningful. Absolute volumes will be disclosed in future reports as measurement systems mature.

BASIS OF PREPARATION

- Operational control boundary covering the Kutch Solar Park and offices
- Safety rates include contractors
- Water measured through flow meters at the intake and tanker logs
- Scope 1 per GHG Protocol Corporate Standard

Generation, capacity and revenue figures are presented in the section on the company at a glance.

SECTION 14

14 Assurance and data quality

How we reviewed the data

This report has not been externally assured. We have, however, subjected the data to an internal review that is described here, so that readers can judge how much weight to place on it.

Internal review

Data owners at the park submit monthly figures for fuel, electricity, safety and water through a shared platform. The sustainability manager checks them against invoices, meter reads and incident logs. Our finance team reconciles revenue and generation figures to billing records, and the head of internal audit samples selected indicators each year.

OUR PLAN FOR ASSURANCE

- Select an external assurance provider for FY2026
- Begin with limited assurance on a core set of indicators
- Extend to absolute emissions and water volumes
- Publish the assurance report with the next edition

Lenders also review our data through technical and environmental advisers who visit the site during operations. Their reports are confidential, but findings are shared with the Board.

We invite readers to challenge our data, and we will correct errors in future editions.

SECTION 15

15 GRI content index

Where to find each disclosure

Statement of use. Aurelia Renewables Pvt Ltd has reported the information cited in this GRI content index for the period 1 April 2024 to 31 March 2025 with reference to the GRI Standards. Information is self-reported and not externally assured.

SECTION 16

16 Glossary

Terms and abbreviations

Bifacial module

A solar module that generates power from both its front and rear faces.

BRSR

Business Responsibility and Sustainability Report, the disclosure format prescribed by SEBI for listed entities in India.

BRSR Core

The subset of BRSR indicators, across nine ESG attributes, that is subject to assurance and value chain disclosure.

CPCB

Central Pollution Control Board, the statutory body under the Ministry of Environment, Forest and Climate Change.

CSR

Corporate social responsibility, spending governed by Section 135 of the Companies Act, 2013.

Curtailment

Reduction of generation ordered by the grid operator.

ESG

Environmental, social and governance.

FY2025

The financial year from 1 April 2024 to 31 March 2025.

GHG

Greenhouse gases, expressed as carbon dioxide equivalent (tCO₂e) using IPCC AR6 warming potentials unless noted.

GRI

Global Reporting Initiative; this report is prepared with reference to the GRI Standards 2021.

GWh

Gigawatt hour, one million kilowatt hours.

IFC Performance Standards

Environmental and social standards of the International Finance Corporation used by project lenders.

Lakh

A unit of 100,000. One crore equals 100 lakh, or 10 million.

Limited assurance

A lower level of assurance, expressed as a negative-form conclusion, based on less extensive procedures.

LTIFR

Lost Time Injury Frequency Rate, the number of lost-time injuries per million person-hours worked.

MSME

Micro, small and medium enterprise, as classified under the MSMED Act, 2006.

MTPA

Million tonnes per annum.

MWp

Megawatt peak, the DC nameplate capacity of solar modules.

Performance ratio

The ratio of actual to theoretical energy output of a solar plant.

Pooling substation

A substation where power from many inverters is combined for transmission.

PPA

Power purchase agreement.

Reasonable assurance

A higher level of assurance, expressed as a positive-form opinion, with more extensive testing than limited assurance.

REC

Renewable energy certificate, a tradable instrument representing one megawatt-hour of renewable generation.

Scope 1

Direct GHG emissions from sources owned or controlled by the company.

Scope 2

Indirect GHG emissions from the generation of purchased electricity, steam, heating or cooling.

Scope 3

All other indirect GHG emissions in the value chain, upstream and downstream.

SEBI

Securities and Exchange Board of India.

TCFD

Task Force on Climate-related Financial Disclosures, whose recommendations structure our climate reporting.

tCO₂e

Tonnes of carbon dioxide equivalent.

Tracker

A mount that rotates solar modules to follow the sun.

Value chain

The activities, actors and flows upstream and downstream of a company's own operations.

ZLD

Zero liquid discharge, a design in which treated effluent is fully recovered and reused.

SECTION 17

17 Forward-looking statements

Important notice to readers

This report contains statements about Aurelia Renewables Pvt Ltd's plans, objectives, strategies, expectations and aspirations that are forward-looking in nature. Such statements are not guarantees of future performance. They reflect management's current views and assumptions as of the date of publication and are subject to risks, uncertainties and changes in circumstances that are difficult to predict. Words such as aim, expect, intend, plan, will, target and ambition identify many of these statements.

Actual outcomes may differ materially from those expressed or implied, because of factors that include changes in government policy and regulation, movements in commodity, power and fuel prices, availability of capital and technology, climatic and weather events, project approvals and construction timelines, counterparty performance, litigation, and general economic conditions in India and the markets we serve.

Data in this report has been compiled from internal systems, plant records and third-party sources. Where estimates or methodologies have been used, we have tried to say so in the notes to the relevant tables. Figures may not add up because of rounding. Past performance is not a guide to future results. Nothing in this report constitutes an offer, invitation or recommendation to buy or sell securities, and readers should not rely on it as investment, legal or tax advice.

Aurelia Renewables Pvt Ltd undertakes no obligation to update any forward-looking statement, except as required by applicable law or by the Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015, as amended. This publication, the company, its facilities, people, events and data are entirely fictional and have been created for an academic demonstration of ESG claim verification.
